

PSE[®]
ARCHERY

2019 PRODUCT GUIDE

2019

PSE REINVENTED THE WAY YOU BUY BOWS.

Comfort behind the bow is the key characteristic of a shootable bow. What creates comfort? Control. PSE's Evolve line seamlessly blends comfort and control without sacrificing speed. Our first-in-class engineering continues to expand our comfort-cam technologies, creating smooth movements with quick action.

Acceleration is part of PSE's DNA. Fueled by our passion for speed, we've developed the Vapor line to deliver powerful bows that pack a punch. High speed equates to intense power, building the momentum you need to get the results you want. We've shattered speeds in the archery world for 49 years, and we're not going to stop now.

Adapt your bow to your ability. At PSE, we engineer our Adapt line of equipment for one reason: the adjustability to fit...forever. Gone are the days of feeling forced to buy a new bow as soon as you advance your skills. Adapt bows are built to last...and take you from novice to experienced. Why change when you can adapt?

Your bow should be a reliable tool that produces consistent results. The PSE Target line is designed to provide precision that you can count on...every time. It is our dedication to dependability that creates trust and eliminates doubt. With your Target bow in hand, you will be confident in its accuracy, and secure the victory. Again. And again. And again.

PSE knows that a bow is only as good as the string and cables that you put on it. Historically, in order to make a quality bowstring you needed a really strong stringing operator placing as much tension on the string as possible and then serving the string. Unfortunately, humans are only so strong, and they get fatigued. Was your string made the first thing in the morning, or at the end of the day when the operator is tired?

That is why the best strings and cables were made by custom string makers, otherwise it was impossible to get the quality needed when mass producing strings...
UNTIL NOW!

Our proprietary LiveWire™ bowstring machines use a fully automated, computer controlled process that is capable of stretching each individual strand of the string to the optimal tension -- stretched to capacity but short of the point of creating fatigue. The machine then wraps the bundle under that optimal tension and serves the string under full load at tensions previously impossible to achieve.

In addition, LiveWire™ strings and cables use only the finest premium BCY materials available and builds each string from a single bundle of 452x string material and Halo serving material. The result is bowstrings and cables that are ultra-long lasting, have almost zero stretch, and virtually no peep rotation.

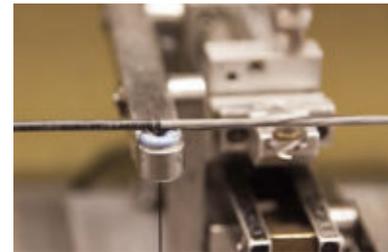

Livewire premium strings and cables are the ultimate evolution of the bowstring, and the only strings and cables worthy of the PSE Pro Series name.

LIVEWIRE™

BOW STRINGS & CABLES

PSE's exclusive LiveWire™ bowstring machine stretches each individual strand to it's optimal tension.

The LiveWire™ machine then wraps the string under full load, serving throughout the entire process at tensions previously impossible to achieve.

This automated process results in strings that have virtually zero stretch or peep rotation and are ultra-long lasting.

PSE Evolve Cam Modules give YOU the power to choose how your bow shoots! Choose the ultimate comfort of the HL module, the hard-hitting speed of the FL module, or the target-optimized LL module. The decision is yours! Please see the Accessories Section for purchasing information.

FL MODULE (EF CAMS)

(65-75% Let-Off)

- For shooters who want pure performance
- Increased Speed, Reduced Let-Off
- Comes Standard on the Carbon Air® Stealth EF

HL MODULE (SE, EF AND EC CAMS)

(80%-90% Let-Off)

- For shooters who want ultimate comfort.
- Super High Let-Off
- Comes Standard on the Evolve®28, Evokes®, Carbon Air® EC and SE

LL MODULE (SE CAMS)

(65-75% Let-Off)

- Designed for the target shooter
- Comfortable Lower Let-Off
- Comes Standard on the Perform X, Perform X 3D, Shootdown and Supra Focus

HL MODULE (SE CAMS)

(80%-90% Let-Off)

- For shooters who want ultimate comfort
- Super High Let-Off
- Optional after-market module for Perform X, Perform X 3D, Shootdown and Supra Focus

FRS
FLEX ROD SYSTEM

FRS TORQUE REDUCING SYSTEM

PSE's Flex Rod System (FRS) is specially engineered to eliminate torque during your draw cycle, delivering an incredibly stable shooting experience under any weather conditions. The FRS is highly adjustable for precise tuning and clearance, and is designed to work with PSE's new RollerGlide™ or a traditional cable slide. The flexible rod can also be swapped out with a solid carbon or aluminum rod for additional tuning options.

rollerglide
CABLE GUARD

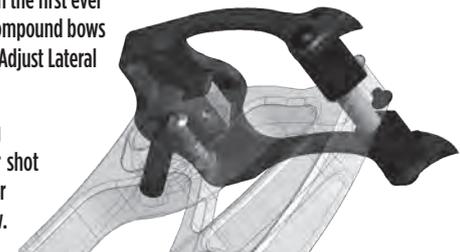

PSE ROLLERGLIDE™ SYSTEM

The PSE RollerGlide™ is the smoothest cable slide on the market, rolling with your cable to eliminate cable friction. It's compatible with Flexxslide™ 1 and Flexxslide™ 2 bows, or any standard 3/8" diameter cable guard rod. The RollerGlide™ is a leap forward in cable guard technology.

PSE LATERAL ADJUSTMENT SYSTEM

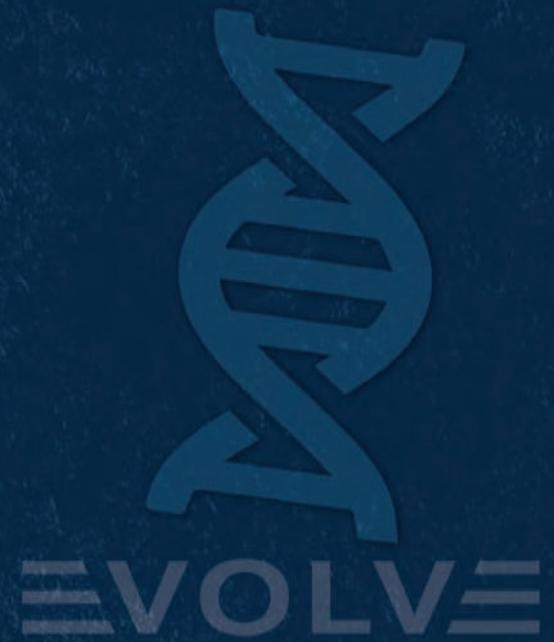

PSE shook up the target bow market with the first ever Lateral Adjustment System (L.A.S.) for compound bows and it now features our improved Micro-Adjust Lateral Adjustment System.

The Micro L.A.S. offers advanced tuning capabilities and makes adjusting center shot and tuning bows more simple than ever before with a single micro-adjust screw.

Look for the Kolorfusion logo on select premium PSE bow models. This fantastic process produces an incredibly realistic finish!

CARBON AIR® STEALTH EF

The 2019 PSE Carbon Air® Stealth reigns supreme as the most advanced carbon bow ever made. Engineered on an upgraded mono-coque carbon riser, the Stealth is built from a single piece of carbon, making it stiffer and stronger than other carbon risers...and with our proprietary S-RAC technology core, this bow is both unbelievably light at 3.3 lbs. and dead in the hand. The Stealth also features PSE's Wedge Lock Pockets for easier tuning, our new precision Flex Rod System, titanium hardware, and ultra-premium LiveWire™ strings.

XPEDITE™

PSE's acclaimed Evolve Cam System flexes its muscles with the 2019 PSE Xpedite™! The Xpedite™ is built on a radically redesigned caged-reflex riser designed to produce higher speeds while still delivering comfort. If you prefer a more balanced shooting experience, the Xpedite™ can shoot 352* fps at up to 90% let-off with the factory-installed HL module. But if you're looking to crank things up, install the optional FL module to shoot a blazing 360 fps!

* The Xpedite comes standard with the HL module at 352 fps. The optional EFL module provides speeds up to 360 fps

SUPRA™ FOCUS

It takes intense focus to beat the competition and stand at the top of the podium; that's why PSE has re-engineered our Supra target bow to achieve unparalleled shootability and ease of aiming, allowing you to keep your focus where it needs to be. The 2019 Supra Focus features a deflexed riser specifically designed to help you achieve a rock-solid stance that reduces pin float and keeps your sight on target.

The Supra Focus also features PSE's all-new shorter Wide-Track™ target limbs, a center pull design, and PSE's unparalleled SE cam, ensuring that this bow delivers less lateral flex, perfect nock travel, and a smooth and steady back wall shot after shot.

HERITAGE

PSE[®]
ARCHERY

HERITAGE SERIES

ACHIEVE™

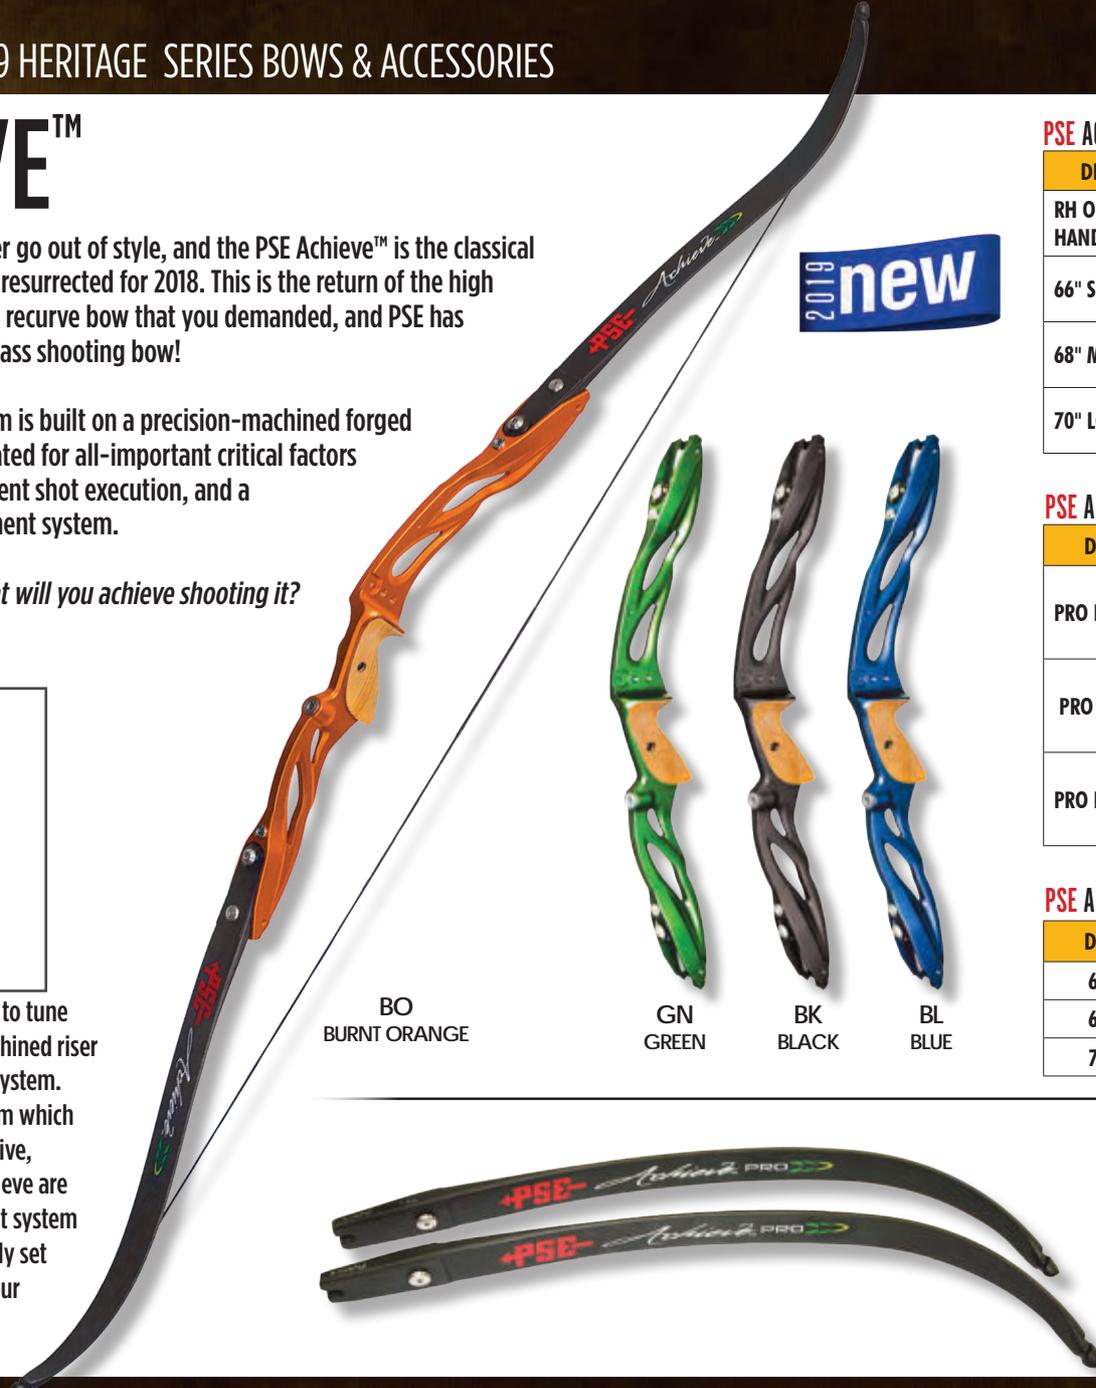

They say the classics never go out of style, and the PSE Achieve™ is the classical competition recurve bow resurrected for 2018. This is the return of the high performance competition recurve bow that you demanded, and PSE has delivered a truly world-class shooting bow!

The PSE Achieve™ platform is built on a precision-machined forged riser designed and evaluated for all-important critical factors including vibration, efficient shot execution, and a user-friendly limb alignment system.

The only question is, what will you achieve shooting it?

The PSE Achieve is also easy to tune thanks to our precision-machined riser and micro-adjustable limb system. Unlike a locking screw system which is cumbersome and unintuitive, adjustments on the PSE Achieve are made via the limb alignment system to help you quickly and easily set up your bow... and shoot your way onto the podium!

ARROWS

2019 CARBON FORCE ARROWS

CARBON FORCE

TRUWEAVE TECHNOLOGY™

Carbon Force TruWeave™ arrows are made using a computerized process that wraps layers of high modulus carbon fibers at precise angles to form the arrow shaft. The end result is a woven arrow and shaft that is 30% stronger and consistently straighter than conventional carbon arrows.

2019 CARBON FORCE PACKAGING
